

Would you like to work as a software developer in a research environment?

The Institute of Heritage Sciences (Incipit) of the Spanish National Research Council (CSIC) is composed of over 50 people whom, for over fifteen years, have focused on cultural heritage as a research problem. Archaeologists, soil scientists, architects, historians, engineers, anthropologists and computer scientists work under the same roof, creating an environment that is truly multidisciplinary and where each project comprises a new challenge.

Incipit is seeking the best candidates to incorporate to its scientific software development team. You must have a tertiary education degree, have a deep understanding of the Microsoft .NET platform, and possess extensive knowledge and experience in at least some of these areas: software architecture, systems and applications design, programming, database design, and design and construction of user interfaces.

The top applicants will be guided through a selection process that will conclude with an offer of a 1-year contract, hopefully extended depending on results. Benefits will be around 26.700 € per annum. The position is based on Incipit's headquarters in Santiago de Compostela, Spain.

If you enjoy constructing software in complex application domains that need a great dose of research, please send an expression of interest to cesar.gonzalez-perez@incipit.csic.es by 29th February 2012. Please attach your résumé plus a 300-word text explaining why you believe that you are the best person for the job.
